You feel connected to the characters and you care about them. Although it is only about 60-90 minutes long, the game has a very complete story with unforgettable characters, starting, middle and end and a very clear goal. This game is absolutely amazing and there is a very nice variation of copy paste games that the App Store has to offer as clans clash and there are clones and war games and clones. I actually have quality games with the story and don't see many apps that I get 5 star friends for it! Opus' story: The Day We Find Earth begins tens of millions of years after people have already abandoned their origin planet to live among the stars. By then, Earth had become a mythical planet, and belief in its existence had become a religion called Earth matter. On the other hand, the human gene pool has broken down after thousands of years of genetic engineering, and the only way to return this damage is to extend to the oldest remaining gene sample on their long-forgotten planet. Project Earth was later established and a spaceship called OPUS was launched to search for Earth and save the failed human race. The story follows OPUS' Emeth, a childish robot built by doctor Lisa from the crew to support the mission, but is soon forced to close for unknown reasons. After re-launching from her long hibernation, Emeth finds her alone on board, until doctor Lisa activates her AI hologram. Emeth decided to continue her mission with the help of the hologram Lisa to keep her promise to find Earth.
